

ABSTRACT

The present invention provides a game machine and game program that includes a display module providing, at a start of a game, a changing display wherein a plurality of symbols statically displayed in a plurality of display regions is changed to various symbols in a continuously changing manner and a static display wherein the symbols being displayed in a changing manner are displayed again in a static manner in the display regions; an evaluation module evaluating whether symbols establishing a win are statically displayed on a win line selected ahead of time on the display module; a moving indicator on the display module; and a control module controlling game progress and emphasizing the win line when the win is established by moving the indicator along the win line. The game machine and game program of the present invention displays established wins in a manner that is easy to understand.
